# The-Big-Username-Blocklist
- This is a opinionated blacklist of words that you might not like to see used as usernames in your service (think **username**.domain.com, domain.com/**username** or **username**@domain.com).
+ This is a opinionated blocklist of words that you might not like to see used as usernames in your service (think **username**.domain.com, domain.com/**username** or **username**@domain.com).

- The editable blacklist can be found in [list_raw.txt](list_raw.txt) and is categorized into six sections:
+ The editable blocklist can be found in [list_raw.txt](list_raw.txt) and is categorized into six sections:

  - **Privileges** User privilege terms to prevent faked authority. Example: _root_, _super_
  - **Code**: Programming terms that you might want to avoid in a url. Example: _void_,
```

```
                                                  _null_
                                                  @@ -10,7 +10,7 @@ The editable blacklist
                                                  can be found in [list_raw.txt]
                                                  (list_raw.txt) and is categ
10  10                                            - **Sections**: Common website pages and
                                                  sections. Example: _faq_, _help_
11  11                                            - **Actions**: User actions. Example:
                                                  _delete_, _create_
12  12
13      - You can try the blacklist using the tool
                                                  [Username checker]
                                                  (http://marteinn.github.io/The-Big-Username-
                                                  Blacklist-JS/).
        13  + You can try the blocklist using the tool
                                                  [Username checker]
                                                  (http://marteinn.github.io/The-Big-Username-
